Compact Cassette Tapes Posted: 23 May 2013 06:50 msvlad Joined: 23 Jan 2003 Posts: 4759 Location: "Heaven" Thanks for the tips. Was really interested to see how well the ultralights would do. I just bought myself a 910 and haven't fired it up yet. I didn't see any way to change the priority. I'm using it to backup my DVDs and CDs. I wanted to change the priorities so the newer media took priority, but there doesn't seem to be a way to do this. Any thoughts? Thanks! Sakhivel wrote: "Can you cut the back of a DVD case and make a custom ROM chip?" No problem, using the disk bay, you can access two or three slots to make your custom ROM, with the third slot used for the BIOS, cut the case and make the ROM and put it back to the DVD and it works. The present invention relates to an electrical connector, and particularly to a high-density electrical connector used to electrically connect a central processing unit (CPU) and

---

a memory and being capable of firmly holding the memory. A prior electrical connector is well-known, and comprises a housing having a plurality of terminal fittings formed therein. The housing has a retention portion for retaining the memory which is to be connected. The memory is inserted into the retention portion through a space between the terminal fittings. The memory is electrically connected to the terminal fittings by a pair of projections of the memory, each of which are fitted in a corresponding one of the terminal fittings. The retention portion of the prior connector is required to be sufficiently large to retain the memory. This causes an increase in the total size of the connector, which is disadvantageous. Japanese Unexamined Patent Publication No. 2-305930 discloses an electrical connector having a retaining portion for retaining the memory. This connector has a plurality of terminal fittings and the memory. Each terminal fitting has a retention portion for retaining the memory. The memory is inserted into the 82157476af
